With the development of cone beam CT scans designed for private dental offices, patients could have the necessary radiographic imaging with a ten-fold decrease in radiation exposure (compared to the medical scan) and not have to "schlep" elsewhere. Sounds like a giant leap forward in the delivery of care, right? Not so fast.

### Radiation and 3-D Dental Imaging: My Take

Cone beam CT uses a cone shaped area detector which means the patient can stay static as the sensor moves around them. The advantages of CBCT over CT is that the machine is more compact and therefore can be included in most dentistry practices - much more convenient than having to visit a separate imaging center.
