Correspondence Analysis Social Sciences

Correspondence Analysis in the Social Sciences gives a comprehensive description of this method of data visualization as well as numerous applications to a wide range of social science data. Various theoretical aspects are presented in a language accessible to both social scientists and statisticians and a wide variety of applications are given which demonstrate the versatility of the method to interpret tabular data in a unique graphical way.

Correspondence Analysis in the Social Sciences - 1st Edition

Correspondence analysis is a multivariate method for exploring cross-tabular data by converting such tables into graphical displays, called 'maps', and related numerical statistics. Since cross-tabulations are so often produced in the course of social science research, correspondence analysis is valuable in understanding the information contained in these tables.

Correspondence analysis in the social sciences : recent ...

Correspondence Analysis. W.J. Heiser, in International Encyclopedia of the Social & Behavioral Sciences, 2001. A correspondence table is any rectangular two-way array of non-negative quantities that indicates the strength of association between the row entry and the column entry of the table. The most common example of a correspondence table is a contingency table, in which row and column entries refer to the categories of two categorical variables, and the quantities in the cells of the ...

Correspondence Analysis - an overview | ScienceDirect Topics

The object of correspondence analysis (CA) is to analyze categorical/categorized data that are transformed into cross tables and to demonstrate the results in a graphical manner. In CA, both relations between row and column variables and relations between different levels of each variable can be obtained [2.

The Use of Multiple Correspondence Analysis to Explore ...

Correspondence analysis is a powerful tool for simplifying tables. Provided that your data is appropriate - two or more dimensions, no negatives, consistently scaled - it can do the job. If you have the data, but are unsure where to start, you can create your own correspondence analysis using the template below!
