Crocodiles

Crocodiles (subfamily Crocodylinae) or true crocodiles are large semiaquatic reptiles that live throughout the tropics in Africa, Asia, the Americas and Australia. Crocodylinae, all of whose members are considered true crocodiles, is classified as a biological subfamily. A broader sense of the term crocodile, Crocodylidae that includes Tomistoma, is not used in this article.

crocodiles also prey upon the young.

Crocodile - Natural history | Britannica

Crocodiles can also be seen sunning with their mouths open, or "gaping." This behavior is also related to regulating their body temperature, and does not mean that the crocodile is acting aggressively toward people. The diet of the American crocodiles primarily consists of small mammals, birds, frogs, turtles, and fish (Fishman et al. 2009).

American crocodile | FWC

The American crocodile (*Crocodylus acutus*) is a species of crocodylian found in the Neotropics. It is the most widespread of the four extant species of crocodiles from the Americas, with populations present from South Florida and the coasts of Mexico to as far south as Peru and Venezuela.. The habitat of the American crocodile consists largely of coastal areas.

American crocodile - Wikipedia

Crocodiles are found in the Kharidian Desert south of Pollnivneach on either side of the River Elid. They are often assigned as Slayer tasks by Vannaka. Bring Waterskins to avoid dying of thirst. A great place to fight crocodiles is on the south side of the river, directly south of the small island where the crocodiles spawn. Because crocodiles are aggressive from a few squares away, this place ...
