Histology - Embryology

Histology, also known as microscopic anatomy or microanatomy, is the branch of biology which studies the microscopic anatomy of biological tissues. Histology is the microscopic counterpart to gross anatomy, which looks at larger structures visible without a microscope. Although one may divide microscopic anatomy into organology, the study of organs, histology, the study of tissues, and ...

Histology - Wikipedia

When preparing a sample (or multiple samples) for histology microscopy, there are multiple steps required. We've covered these steps in brief in a previous article on How Histology Slides are Prepared, but this article will focus on one particular procedure that needs to take place between tissue fixation and the embedding/sectioning of paraffin blocks: tissue processing.

Elements Of Histology [EBOOK]

An acinus (from Latin, grape) is a small ball of secretory epithelial cells containing a tiny central lumen. Acini are usually formed by serous cells. [Acini are sometimes called alveoli, from L., small cavity.]. A typical acinar cell is shaped like a pyramid. Its basal surface, located at periphery of the acinus, rests on the basement membrane separating the acinus from the underlying stroma.
