Mechanics of Materials 2 Solution The assumed sinusoidal initial curvature may be expressed alternatively in the complementary cosine form $y_0 = \delta \cos \frac{\pi x}{L}$ (Fig. 2.17) L Now when P is applied, y_0 increases to y and the central deflection increases from $\delta_0 = 5 \text{ mm}$ to $\delta = 6.8 \text{ Y}$ I For the above initial curvature it can be shown that $\frac{d^2 y}{dx^2} = -\frac{P}{EI}$

Mechanics Of Materials Hearn Solutions

Strength of materials, also called mechanics of materials, deals with the behavior of solid objects subject to stresses and strains. The complete theory began with the consideration of the behavior of one and two dimensional members of structures, whose states of stress can be approximated as two dimensional, and was then generalized to three dimensions to develop a more complete theory of the elastic and plastic behavior of materials. An important founding pioneer in mechanics of materials was
