Intravenous therapy or IV therapy is the giving of liquid substances directly into a vein. It can be intermittent or continuous; continuous administration is called an intravenous drip. The word intravenous simply means “within a vein”, but is most commonly used to refer to IV therapy.

Intravenous (IV) Therapy Technique - Nurseslabs

IV therapy is a complex nursing treatment that most patients in an acute care setting have at one time or another during their hospital stay. Although the technique of actually “placing” an IV is one that needs practice, the theory behind IV placement and management is didactic in nature and can be covered in a module such as this.
