A manual transmission requires the driver to operate the gear stick and clutch in order to change gears (unlike an automatic transmission or semi-automatic transmission, where one or both of these functions are automated). Most manual transmissions for cars allow the driver to select any gear ratio at any time, for example shifting from 2nd to 4th gear, or 5th to 3rd gear.

Final gear ratio =  $2 \times 1.5 = 3$  = gear ratio of 3:1. What this means is that the input gear will have to turn 3 times to turn the output gear (Gear 3) once. Technically, you can simply remove the 2<sup>nd</sup> gear out of the equation and just proceed to the computation of the ratio between the output and the input gears.

traditional, individual gears on parallel axes like a manual transmission, with each gear ratio engaged by a separate hydraulic clutch pack. This design is also noteworthy because it preserves engine braking by eliminating a sprag between first and second gears.

### **List of Honda transmissions - Wikipedia**

A Toploader transmission is a manually shifted three and four speed gearbox introduced in 1963 by the Ford Motor Company to replace the BorgWarner T-10. It was used in most Fords and Mercurys from 1964 until 1973 as well as some foreign models. Officially designated the 3.03 three speed or Ford design four speed. The 3.03 is the centerline distance between counter shaft and mainshaft.
