A patient's refusal for treatment does not allow a dentist to practice below the standard of care (e.g., continued or repeated refusal to have diagnostic radiographs). Patients cannot consent to substandard care, but can refuse treatment recommendations.

Informed Refusal: Recommendations to the treating dentist

The silent treatment is when one person in a relationship ignores the other person, refusing to acknowledge them verbally or through any other method. This usually happens after an argument, but it can also happen when the silent partner is angry and the other person doesn't know why. Being on the receiving end is painful and frustrating.

Six Ways to Respond to the Silent Treatment in ...

In this respect Sir Thomas Bingham M.R remarks that 'the right to reject treatment extends to deciding not to accept treatment in the future by way of advance directive or "living will." A well-known example of advance directive is provided by those subscribing to the tenets of the Jehovah's Witnesses who make it clear that they will not accept blood transfusions.

How to Help a Child Overcome School Refusal | Psychology Today

When Patients Refuse Treatment: Medical Ethics Issues for Physicians. In this interaction, a patient rejected a particular recommendation from his physician. Although the patient continued to see the physician for other matters, he declined a referral to a urologist. Thus, this case explores ethical ideas associated with a patient's refusal of treatment.

When Patients Refuse Treatment: Medical Ethics Issues for ...

We must remember that patients have the right to refuse treatment. Dentists should discuss the risks of no treatment to be sure that the patient understands the consequences. If this fails to change the patient's mind, then a refusal of treatment form that details the risks of no treatment needs to be given to the patient and handled in the same manner as the informed consent form.

Consent or refusal: What every dental practice should know ...

Sometimes you may be faced with people who refuse to talk. This could be for many reasons. They may be angry for having been brought to the clinic. They may be scared that talking to a health worker might mean they will be labelled a 'mental case'. They may be suspicious of your motives.
